

Laminas\Validator\File
\ExcludeMimeType\isValid

isValid

getMagicFile

```
graph LR; A["Laminas\Validator\File<br/>\ExcludeMimeType\isValid"] --> C[getMagicFile]; B[isValid] --> C;
```

The diagram illustrates two calls to the `getMagicFile` method. A large box on the left contains the namespace and class name `Laminas\Validator\File` followed by the method `\ExcludeMimeType\isValid`. A smaller box below it contains `isValid`. Both boxes have blue arrows pointing to a gray box on the right labeled `getMagicFile`.
