

ArrayIterator

```
classDiagram
    class ArrayIterator
    class ElementList {
        +offsetSet($offset, $value)
        +offsetUnset($offset)
    }
    ElementList --|> ArrayIterator
```

The diagram shows two class boxes. The top box is labeled 'ArrayIterator' and has two empty rectangular compartments below its name. The bottom box is labeled 'ElementList' and has two compartments below its name. The first compartment of 'ElementList' is empty, and the second contains two method signatures: '+ offsetSet(\$offset, \$value)' and '+ offsetUnset(\$offset)'. A blue arrow with an open triangular head points from the top of the 'ElementList' box to the bottom of the 'ArrayIterator' box, indicating that 'ArrayIterator' inherits from 'ElementList'.

ElementList

+ offsetSet(\$offset,
\$value)

+ offsetUnset(\$offset)
