

MessageHandlerInterface

```
classDiagram
    class MessageHandlerInterface {
    }
    class EarlyExpirationHandler {
        + __construct(ReverseContainer $reverseContainer)
        + __invoke(EarlyExpiration Message $message)
    }
    MessageHandlerInterface <|-- EarlyExpirationHandler
```

The diagram illustrates a class hierarchy. At the top is the 'MessageHandlerInterface' class, represented by a white box with a black border and two empty internal compartments. Below it is the 'EarlyExpirationHandler' class, represented by a grey box with a black border and three internal compartments. The top compartment of the 'EarlyExpirationHandler' box contains the class name. The bottom compartment contains two method definitions, each preceded by a '+' sign. A blue arrow with an open triangular head points from the top of the 'EarlyExpirationHandler' box to the bottom of the 'MessageHandlerInterface' box, indicating that 'EarlyExpirationHandler' inherits from 'MessageHandlerInterface'.

EarlyExpirationHandler

+ __construct(ReverseContainer
\$reverseContainer)
+ __invoke(EarlyExpiration
Message \$message)
