## RequirementInterface + getTitle() + getDescription() + getValidationMessages() + isMissing() + isOptional() + isOutOfContext() + isValidated()

## AbstractRequirement

```
# $optional
```

# bool \$recommended\_for \_security

# \$out\_of\_context

# \$title

# \$description

# \$validated

# \$validation\_messages

+ \_\_construct(?string \$title, ?string \$description

=null, ?bool \$optional=false,

?bool \$recommended\_for\_security =false, ?bool \$out\_of\_context=false)

+ getTitle()

+ getDescription()

+ getValidationMessages()

+ isMissing()+ isOptional()

+ isOptional()

+ isRecommendedForSecurity()

+ isOutOfContext()

+ isValidated()

# check()

+ \_\_construct(string
 \$title, array \$paths,
 bool \$optional=false)
# check()
